

Enterprise Password Management

FACT: Nearly 81% of hacking-related data breaches succeed through stolen or weak passwords.

Businesses that enable a culture of cybersecurity by enforcing strong passwords have a leg up, especially those who utilize a password manager to make the process faster, easier and more secure.

Omega Systems' enterprise password management tool delivers the secure, cost-effective capabilities you need to keep your employees' credentials – and thus, your organization's data – safe from today's most advanced cyber threats.

5 Reasons to Consider a Password Manager for your Business

Primary Benefits

Agility

Work securely from anywhere with device syncing & multi-browser support

Convenience

Store and share passwords between teams or generate encrypted, one-time passwords (OTPs) for clients, vendors or others who need temporary access

Protection

Reduce your risk for password-driven data breaches and ransomware attacks

Productivity

Increase employee productivity and reduce instances of forgotten credentials and 'reset password' attempts

Affirmation

Demonstrate security-forward best practices to boards, investors, regulators and cyber insurance providers

Say goodbye to forgotten, weak, reused or missing passwords!

Let your enterprise password manager do the heavy lifting. Empower your teams to manage credentials confidently with an intuitive platform designed for both ease of use and robust security.
